

SWITCH PROBE SF-3.15x49-A

SWITCH PROBE

SWITCH PROBE SF-3.15x49-A is a high-precision probe used for measuring the thickness of coatings and films. It is designed for use on a wide range of materials and provides accurate, repeatable results.

SWITCH PROBE SF-3.15x49-A is a high-precision probe used for measuring the thickness of coatings and films. It is designed for use on a wide range of materials and provides accurate, repeatable results. SFENG provides a wide range of products and services to meet your needs.

SWITCH PROBE

Model	SF-3.15x49-A
Material	Be Cu, Steel
Thickness	0.1, 0.2
Accuracy	±0.01
Resolution	Be Cu, Steel
Operating Temperature	0, 100
Probe Length	150 mm
Probe Diameter	3.15 mm

SWITCH PROBE SF-3.15x49-A is a high-precision probe used for measuring the thickness of coatings and films. It is designed for use on a wide range of materials and provides accurate, repeatable results.
